Art Unit: 2815

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,8,17,24,94,114,115,119,133 and 134 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Bjork et al, Nano Letters, 2002, Vol.2, No.2, pp.87-89.

Bjork teaches growth of nanowhiskers including heterojunctions of InP and InAs material including strain relaxation. See figure 2. The above claims are anticipated as figure 2b shows an interface abruptness on the level of monolayers. In regard to recitations of a plurality of nanowhiskers, note that Bjork recites "whiskers" in the plurality and commonly a plurality are grown. It is at least obvious to grow a plurality for fabrication of multiple devices as lasers for greater luminescence, or as diodes for larger current control, or transistors for larger current switching.

Claims 1,8,17,24,94,114,115,119,133,134 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bjork (Nano) in view of Ohlsson et al APL 11/01.

Bjork is stated to be fabricated with the process of Ohlsson. Accordingly parallel arrays of nanowhiskers are obvious structure for the strained whisker material of Bjork. Parallel arrays are useful for experimentation and for making arrays of devices. Claims reciting parallel arrays are obvious structure.

Brown '822 is relevant art.
